# EASIBATH

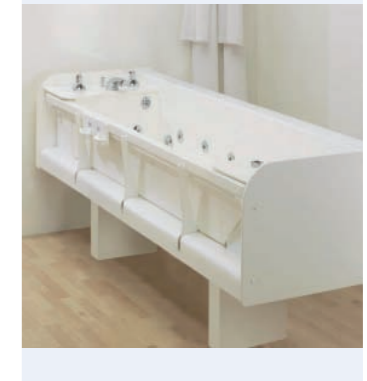

## Assisted bathing, showering and changing

Easibath was introduced to address the problem of high dependency bathing. It acts as a variable height bath, reducing the risk of back strain, while also serving as a showering platform and changing bench. The load bearing fold side has the twin benefits of allowing ambulant users to enter the bath, as well as giving a Carer access for changing and dressing the user. For non-ambulant users, Easibath is designed for use with fixed, mobile or ceiling mounted hoist systems.

Easibath is available in a range of standard sizes and can also be specially manufactured to the customers' own specification, including Special Order units which are both longer and wider than standard models. A base and side cushion, along with a choice of backrest (not required with 1700 model) are supplied with the bath as standard and a comprehensive range of supports and mouldable vacuum cushions can be used to customise the support provided. Please see our cushions and supports literature for full details.

A combination of supports for the needs of the individual bather is normally determined by demonstration of the bath in the user's home or other convenient location. Kingkraft understand that, over time, the needs of the bather may change and we are available to give advice and supply alternative supports to ensure that the most suitable position for the bather is maintained.

### standard features

- Load bearing dropside design
- Raise and lower
- Side and base cushion
- Choice of backrest with cushion
- Bath fill anti-scald TMV3 thermostatic mixer tap
- Left or right handed tap position

### additional options
